# Scenario 1

---

Conventional Warehouse  
with Reserve Storage and  
Forward Picking Locations

## Picking Location Assignment

- Full pallet storage in reserve area
- Full pallet replenishment to picking area
- Loose case picking from fixed or dynamic pick locations
- Re-storage of partials that have no demand

# Layout

# What can this system do?

---

# Manual Wave Building, Order Release and Allocation

---

- User defined
- Based on known allocation criteria
- Snapshot of operations disposition

# Conventional Picking Process

---

- Typically Person-to-Goods
- System Directed and User Driven
- Devil is in the Exception Handling
- Multiple Methods Available

# Conventional WMS-Picking

# What does this system achieve?

---

## Conventional Order Processing

Dependent on  
User Initiative &  
Control

Limited Automatic  
Planning Possible

Low Risk  
Start-Up

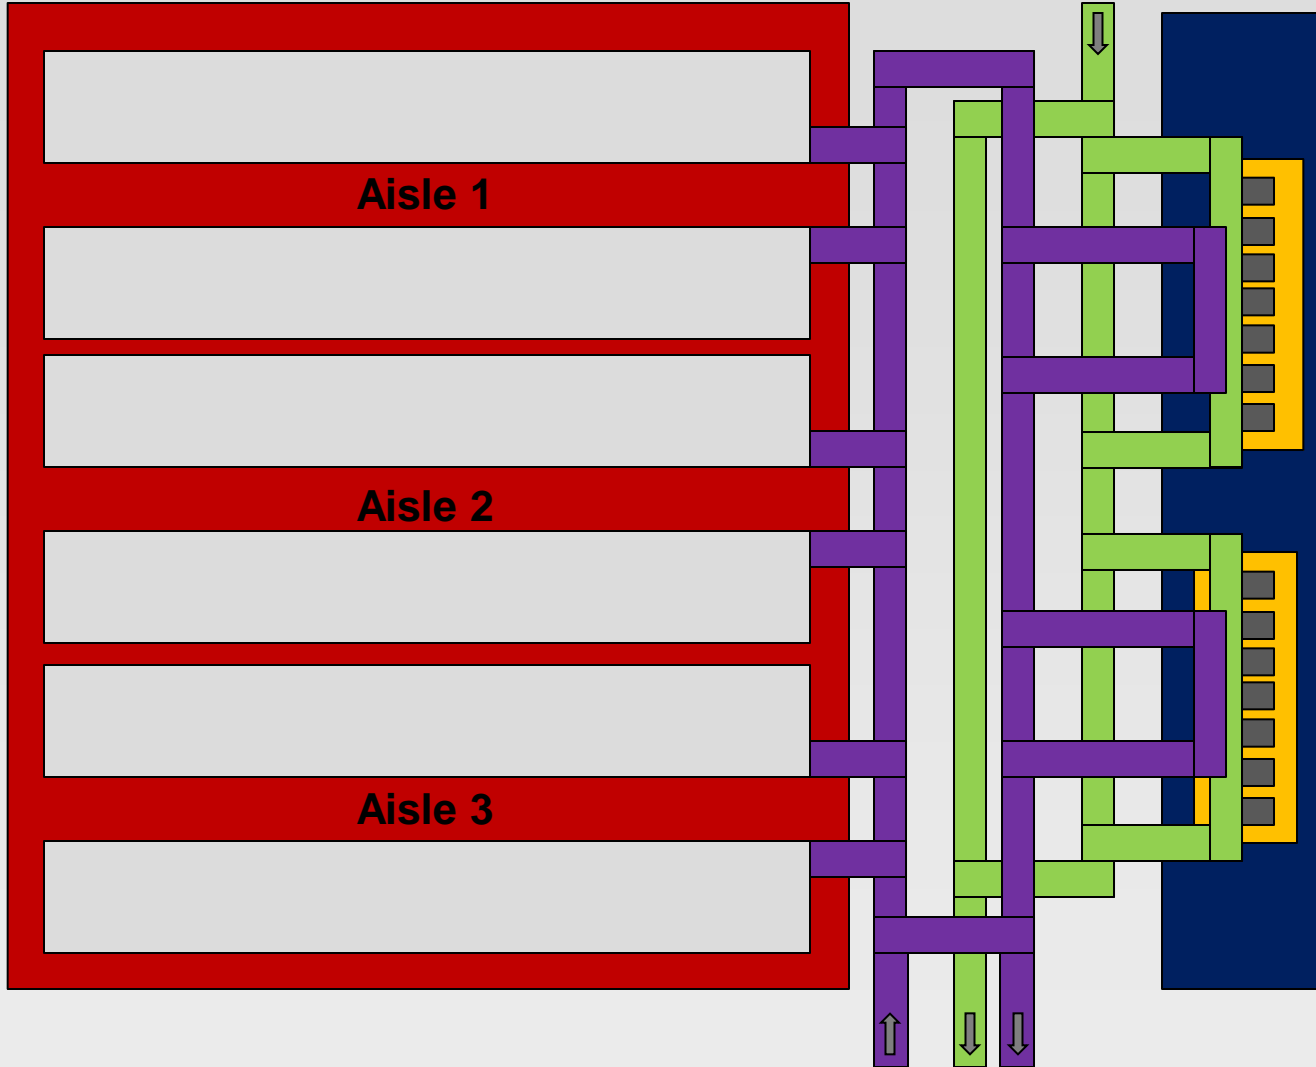

**Flexibility**  
*(at the EXPENSE of EFFICIENCY)*

# Scenario 2

---

3 Aisle Miniload with  
2 Goods-to-Person Workstations

## Layout

Legend:

**Miniload**

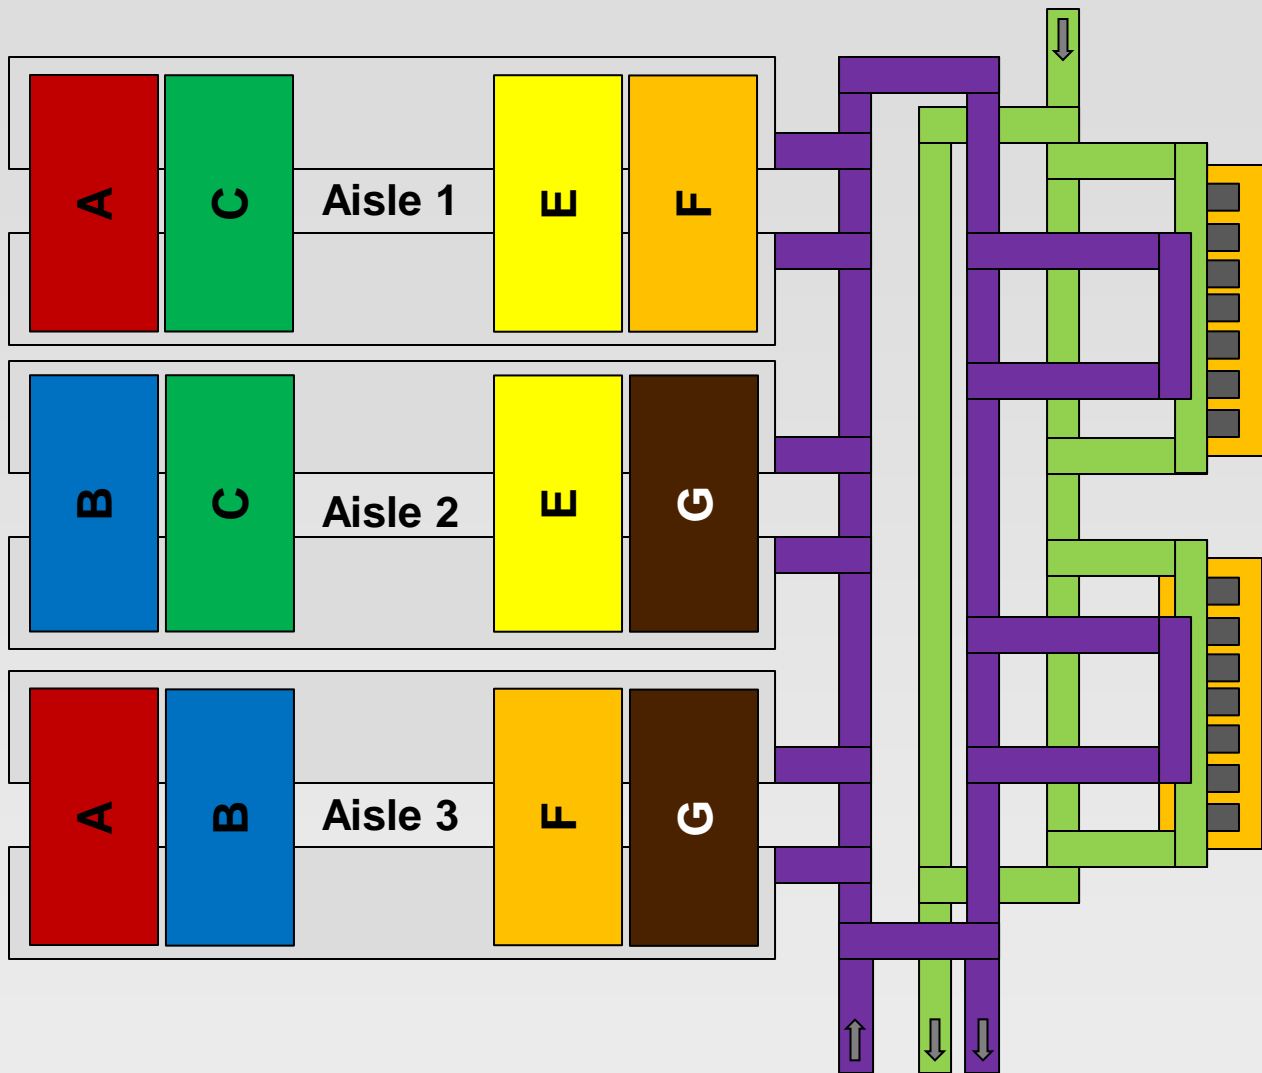

**Inventory Tub CS**

**Order Tub CS**

**GTP Workstation**

**Reserve Area**

**Picking Area**

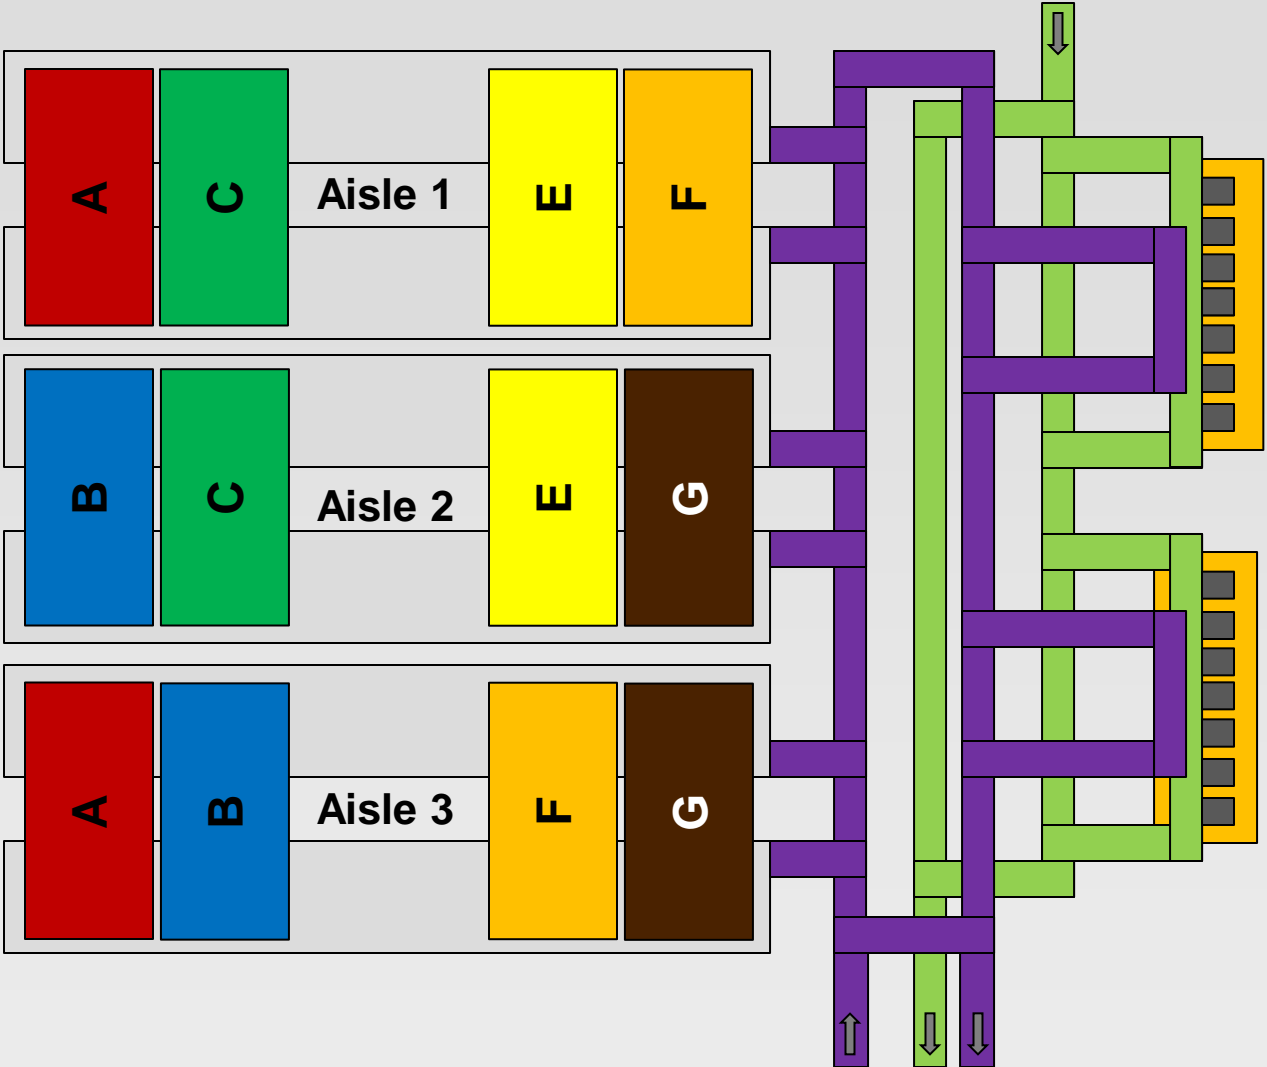

## SKU Slotting

SKU's are evenly distributed across aisles with redundancy

# What can this system do?

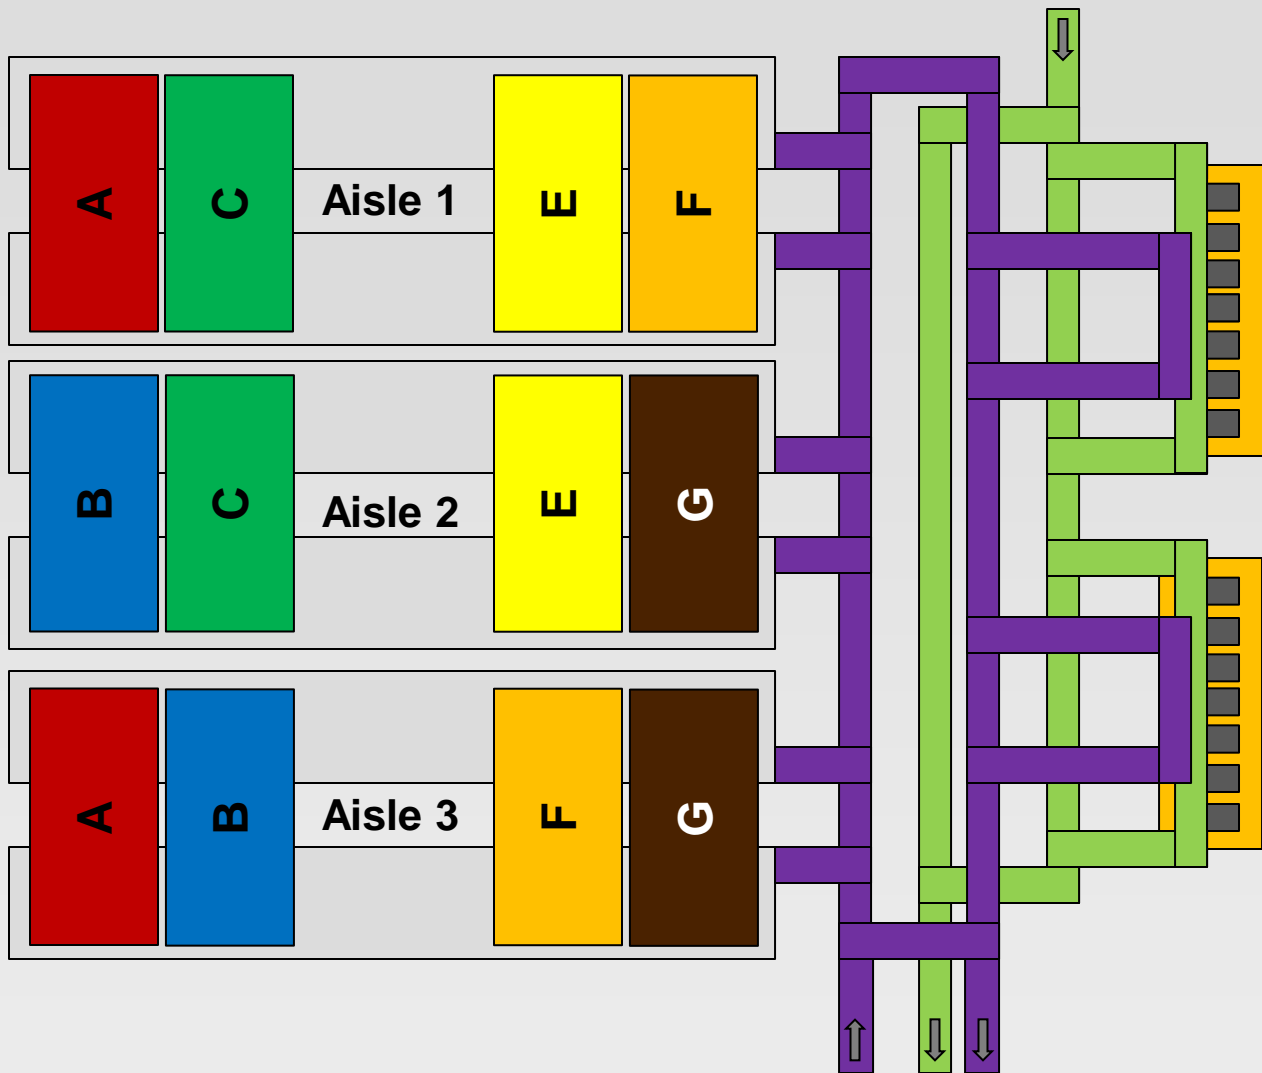

---

# General Picking Process

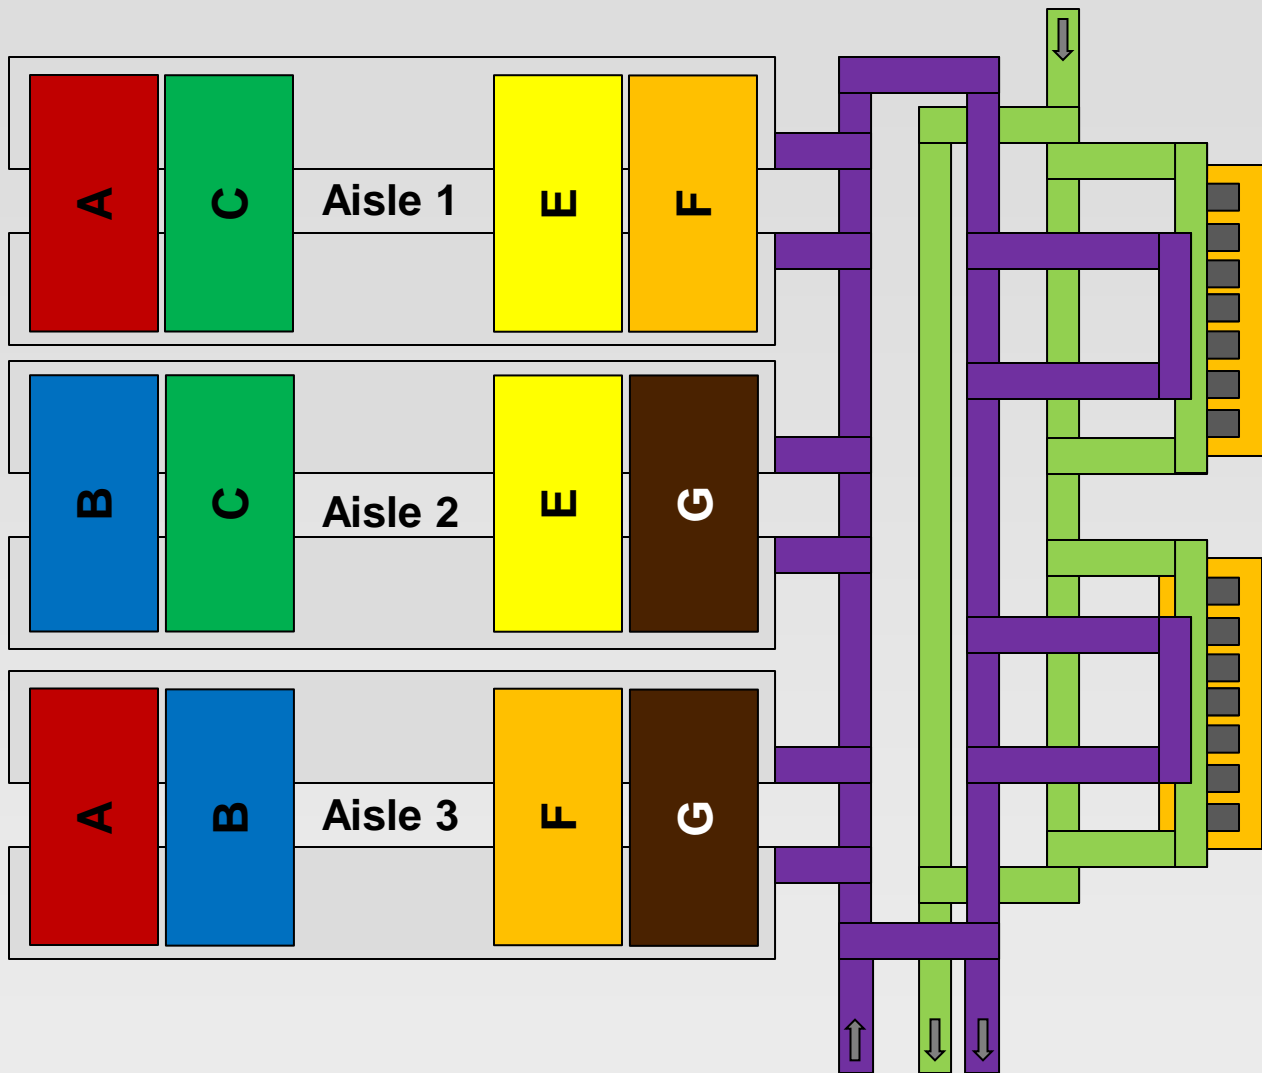

The system is synchronizing the release of order tubs and inventory tubs

## Automatic Substitution

Tubs with damaged or missing inventory will be automatically substituted with high priority

## Automatic Load Balancing

Workload will be balanced across GTP workstations

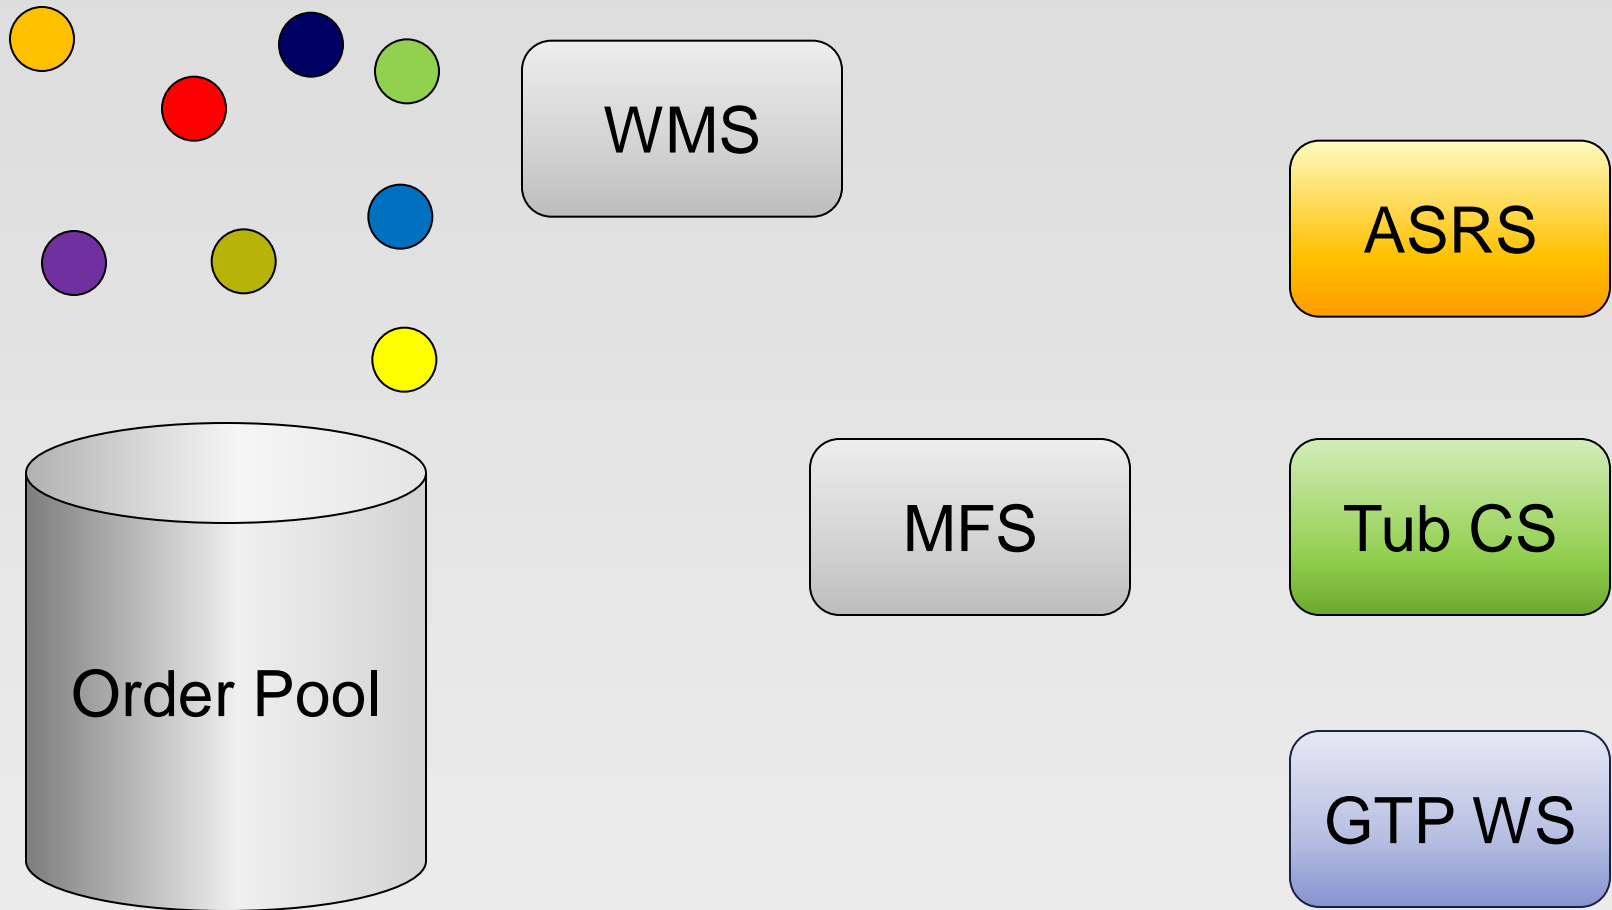

# How does the system do that?

---

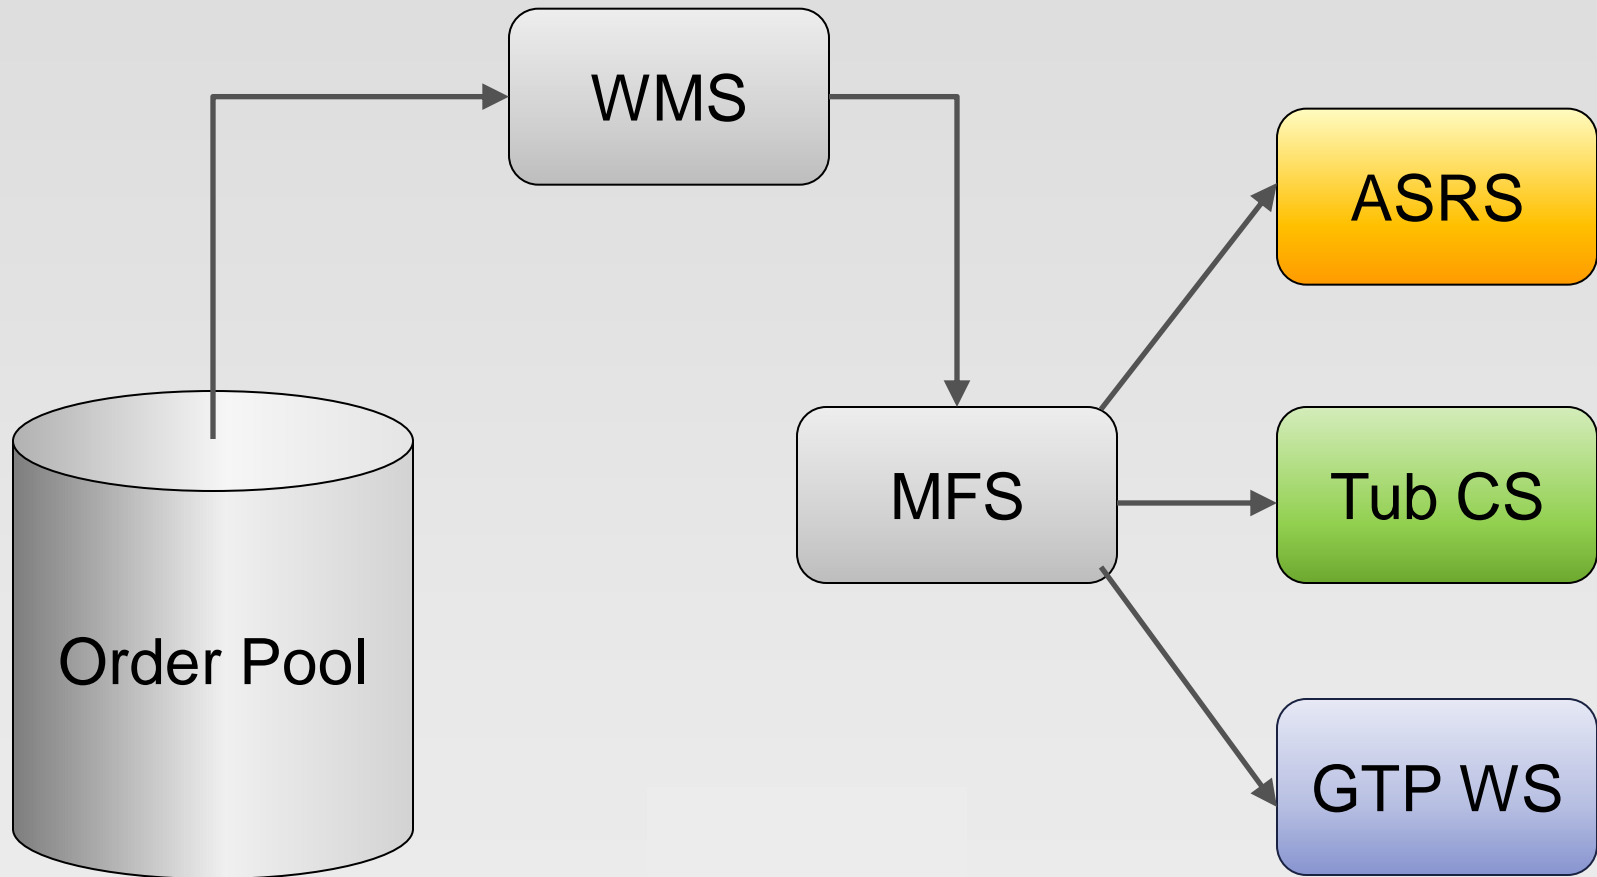

# Software Is The Key

# Automatic Order Processing

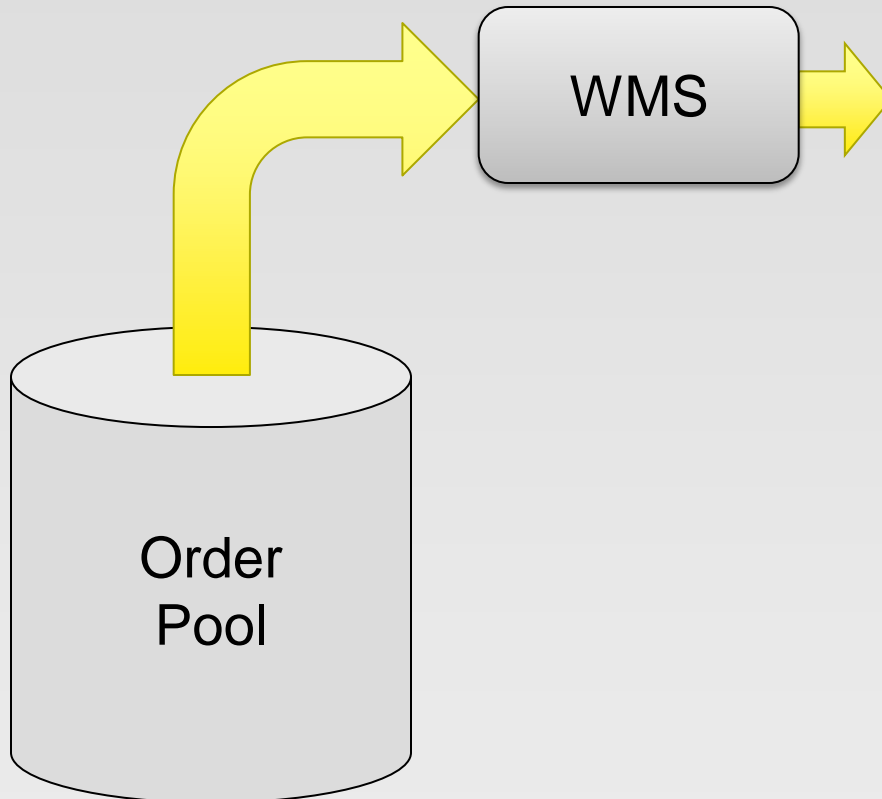

## Automatic Order Processing

## Automatic order processing

### Decision Criteria

Automatic Order Release

Order Priority

UOM Qualification

FIFO / LIFO / FEFO

Batch Control

Equipment Status & Load

Workstation Status & Load

Load Balancing

## Comparison

### Conventional System

Manual Order Release

Automatic Order Release

Order Priority

UOM Qualification

FIFO / LIFO / FEFO

Batch Control

Equipment Status & Load

Workstation Status & Load

Load Balancing

### Automated System

Manual Order Release

Automatic Order Release

Order Priority

UOM Qualification

FIFO / LIFO / FEFO

Batch Control

Equipment Status & Load

Workstation Status & Load

Load Balancing

# What does it achieve?

---

## Automatic Order Processing

Maximum  
Utilization of  
Equipment

Maximum  
Efficiency of  
Operator

No Wait Times at  
Workstation

# Maximum Throughput
